

Very creative and informative.  
Good English.  
Well done!

## Exploration Diary:

### Day 1

- We finally arrived in the middle of nowhere. The Amazonian forest is huge and scary but now there is no going back. The other three are preparing the last details before we go. The two guides told us that this rainforest will be perfect for our research. Actually the other biologist and myself are looking for a fractal pattern in nature. We don't really know what we are going to find but we are optimistic. Oh! And by the way for those who don't know yet what fractals are, I have a little definition for you:

A fractal is a 'natural' or 'mathematic' figure. A fractal is an infinitely repeated pattern. No matter the way you look at it, if it is the angle you change, the rotation, or if you zoom in or out you will get the same shape.

You think it's nonsense? Something that we will never use? Well you are wrong! Fractals are everywhere! I have to go now, let our great adventure begin!

### Day 2

- We are now in the middle of the forest surrounded by weird animals and creepy plants. We didn't sleep much because of the strange noises and the hungry insects... We had already found some plants, but they were not what we were looking for. My biologist colleague said that the more interesting fractal patterns should be closer to the Amazonian river. Well let's have, another full day of hard walk in the woods.
