

i have imagine

through the time by energy

the way for constant

A Planck by two π

was supported by his ball

Saved by two changes

with rate over rate

Had the respect of the time

they sank in the wave

Meet the smallest

with who odd object spinning

Make them all equal

Strange equality

Set many changes on the way

Make them meet a man

An ache with a hat

led them through the Quantum Time

Showing them his key

the knight recognized

th the small one his last twin

And made Quantum weird.
